

The Leotek Advantage

- **Innovation**

LED products are an emerging alternative technology, manufactured with minimal impact to the environment, and maximum impact for the customer.

- **Robust Performance**

LEDs have no filaments or moving parts and can withstand shaking and vibrating without breaking.

- **Time Saving**

LEDs have an “instant on” feature – they require no warm-up time.

- **Dual Energy Options**

LEDs use lower voltage and therefore can run on battery power and solar power.

- **Precise Directional Light Source**

Precision LEDs emit light in a specific direction, providing uniform illumination, while reducing light trespass and light pollution.

- **Reduced Energy Consumption**

Highly efficient LED products require up to 90% less energy than traditional lighting sources.

- **Reduced Maintenance Costs**

LEDs require no lamp or ballast replacement.

- **Environmental Viability**

LED products contain no mercury or lead, and do not require hazardous waste disposal handling, as many traditional lighting sources do.

- **Sustainability**

Long-life LED products have an expected lifespan of greater than 50,000 hours, which can be eight times longer than traditional lighting sources.

- **Eliminating Landfill Waste**

Certain LED products are constructed of an all- aluminum enclosure that is 100% recyclable.
